Salt Spray	96 hours

DIMENSIONS

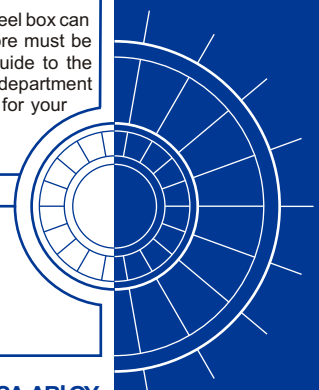

ORDERING AND INSTALLATION

When ordering please give details of the door and frame the lock is being fitted to including material, thickness, size of any rebate and whether the lock is to be fitted to the left-hand or the right-hand of the door. This lock is suitable for solid hardwood doors at least 54mm thick, steel doors and grill gates. When fitting to steel doors and grill gates the lock must be housed within the special outer steel box

which is welded to the gates. For steel faced doors the outer steel box can only be fitted during the door manufacture stage and therefore must be ordered well in advance. This literature is designed as a guide to the extensive range of CLCS products. Please contact our sales department before ordering to ensure you have the correct specification for your application.
